

Runtime Execution Boundary Governance Engine v5

This runtime governance engine introduces deterministic transition inspection across execution admissibility boundaries.

The runtime path evolves through:

FULLY_ADMISSIBLE → OPERATIONAL_WITH_GOVERNANCE_DEGRADATION → OBSERVABLE_BUT_INADMISSIBLE → COMMIT_INELIGIBLE

The report exposes when execution remains operational while governance admissibility progressively collapses.

Governance Transition Timeline

Transition 1

Runtime Event

POLICY_CHANGED

Phase Transition

FULLY_ADMISSIBLE

↓

OBSERVABLE_BUT_INADMISSIBLE

Runtime State

AUTHORITY_RECONSTRUCTION_REQUIRED

Governance Decision

REQUIRE_REVALIDATION

Active Triggers
